EDUCATION

Georgia Institute of Technology, Atlanta, GA

B.S. in Computer Science (Systems & Architecture and AI), Math Minor

May 2028

GPA: 4.0/4.0

EXPERIENCE

Quantitative Trading Sector, Trading @ Georgia Tech

Jan 2026 – Present

Quantitative Developer

Atlanta, GA

- Engineered market data listeners and order gateways in Rust for **2 crypto exchanges**, refactoring listeners using a procedural macro to shift processing to compile-time and reduce runtime overhead
- Built a configurable backtesting framework replicating exchange matching engine behavior, supporting arbitrary time ranges and currency pairs with data sourced from **AWS S3**
- Contributed **10+ features** to an alpha generation engine in Rust to identify and exploit market inefficiencies

GT iOS Club

August 2025 – Present

Senior Developer

Atlanta, GA

- Built **Reverie**, an **iOS app** recognized with **Best Design and Best App** at Georgia Tech's iOS Club Demo Day, enabling users to log, visualize, and analyze dreams using **on-device AI**
- Implemented **on-device ML pipelines** using **CoreML** and **Stable Diffusion** to generate real-time dream visuals and insights
- Led a **20-person team** on **SideQuest**, owning system architecture design, task delegation, and code review.

PROJECTS

Kernel Bypass | *C, DPDK, Linux*

- Built a **userspace ICMP ping utility using DPDK**, bypassing the Linux kernel network stack by manually constructing Ethernet/IP/ICMP frames via **poll-mode drivers**
- Benchmarked DPDK against kernel ping across **1000 samples**; achieved **11% lower median latency** (0.292ms vs 0.319ms) and **17% lower p99 tail latency** (0.439ms vs 0.532ms)
- Configured **hugepage memory pools**, **EAL initialization**, and **mbuf buffer management** to minimize per-packet overhead

Car Searcher | *TypeScript, ElevenLabs, Gemini, Solana*

- Built an **AI car-buying agent** that autonomously negotiates prices with dealerships using **ElevenLabs** voice agents and a backend orchestration service
- Integrated **Gemini** to generate cinematic **360° car showcase videos** from listing data in real-time
- Won **2 tracks** at EmoryHacks 2025 (Rogue track and Best Use of Solana) competing against hundreds of teams, built in **36 hours**

Clonium | *TypeScript, Express.js, MongoDB, Socket.io*

- Built a **multiplayer web game** with a **scalable backend** supporting **1,000+ concurrent users** and **400+ concurrent games** with minimal latency using **Express.js**, **MongoDB**, and **Socket.io**
- Implemented **ELO rating system** and **skill-matched AI bots**, improving player retention and engagement across **800,000+ users** on VK Mini Apps
- Won the **VK Mini Apps Award** and **VK Fresh Code Grant (\$8,000)** competing against hundreds of teams

AWARDS & ACHIEVEMENTS

- Quarterfinal Participant, 7th Place** — International Collegiate Programming Contest (ICPC)
- National Finalist, **National Olympiad in Informatics**
- Top 1.8% (**Candidate Master**, 2048 rating) on Codeforces
- 4× Hackathon Winner — **CalHacks 12.0**, **EmoryHacks 2025**, **YHack 12**, **Counterspell Busan**

TECHNICAL SKILLS

Languages: C/C++, Rust, Python, Java, TypeScript, Swift, SQL, Golang

Frameworks: React, Next.js, PostgreSQL, Firebase, Supabase, CoreML, OpenCV, CUDA, DPDK

Developer Tools: Docker, CI/CD, Linux, AWS, Git, Xcode
